Q2 Partners with Quicksilver Wireline

Q2 is excited to announce a partnership with Quicksilver Wireline (QSO), a leader in plunger lift technology since 2002. Known for their innovative barbell design, Quicksilver together with Q2 offer comprehensive artificial lift solutions, including a game-changing approach to plunger lift systems in horizontal wells.

Unlike conventional check valves that fail around 48 degrees, the Q2 HVS effectively holds fluid in wells up to 89 degrees.

For technical details, pricing, or to learn more about how our solutions can enhance your operations, contact us today!
